A; Description: major component of wild-type curli; interaction between CsgA and CsgB tri
A;Note: curli are thin, coiled fibers expressed on the surface of Escherichia coli that
and H-kininogen; in the absence of CsgA, CsgB can self-assemble into polymers
F;1-20/Domain: signal sequence #status predicted <SIG>
F;21-151/Product: curlin #status experimental <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            curlin major subunit CsgA [imported] - Escherichia coli (strain O157:H7, substrain RIMD C;Species: Escherichia coli (5) = 18-Jul-2001 #18-Jul-2001 #19-Jul-2001 #

-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-Leu-Lys-Lys-...

-!- SUBCEDINIAR LOCATION: Attached to the membrane by a GPI-anchor.

-!- FUM: THE PROSPHATIDYLINOSITOL MOIETY OF THE GPI-ANCHOR CONTAINS A FULLY SATURATED, UNBRANCHED 1-O-ALKYL CHAIN (MAINLY C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-O-ACYL CHAINS (C12:0, C14:0, AND C18:0).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Euglenozoa; Kinetoplastida; Trypanosomatidae; Leishmania.

"Heterrogeneity of the genes encoding the major surface glycoprotein of Leishmania donovani.",
"Heterrogeneity of the genes encoding the infection of macrophages in the mammalian host.
-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.
-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-|-leu-Lvs-Lvs-.|
-!- COFACTOR: Binds I zinc ion per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-!- SIMILARITY: Belongs to peptidase family M8.

"Three distinct RNAs for the surface protease gp63 are differentially expressed during development of Leishmania donovani chagasi promastigotes to an infectious form.";

J. Biol. Chem. 267:1888-1895(1992).

-! FUNCTION: Has an integral role during the infection of macrophages in the mammanian host.

-! CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at Ala-Tyr-|-Leu-Lys-Lys-.

-! COPACTOR: Binds 1 zinc ion per subunit (By similarity).

-! SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

-! SIMILARITY: Belongs to peptidase family M8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LEISHMANOLYSIN.

Medina-Acosta E., Karess R.E., Russell D.G.;

Structurally distinct genes for the surface protease of Leishmania mexicana are developmentally regulated.";

MOD Biochem. Parasitol. 57:31-46(1993).

I. FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and P1 and basic residues at P2 and P3'. A model nonapeptide is cleaved at AAA-Tr-1-Leu-Lys-Lys-Lys-

I. COFACTOR: Binds 1 zinc ion per subunit (By similarity).

I. DEVELOPMENTAL STAGE: Expressed in both the promastigote and the
                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GP63-C1.

-: SUBCELLULAR LOCATION: Outer membrane.
-:- DOWAIN: CONTAINS INTERFECT REPERTS OF A CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-X-T; FUNTHER ON A 16-RESIDUB AND A REGIONAL 48-RESIDUE PRIODICITY IS SUPERINPOSED.
-:- MISCELLANEOUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.
-:- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              53 ANAALALQSDA----RKYD-QLVTRVVTH-EMAHAGQGADNSTIELTQNGFRNNATIDQW
